Introduction

- **The Idea Behind the Business**
- FixWise is a web application designed to simplify the process of booking electronic device repair services.
- The website helps users book repair services for:
 - Phones, Laptops and TVs
- It improves:
 - Transparency
 - Booking speed
 - User experience

Business Problem Addressed

Many customers face problems with traditional repair shops, such as:

- Unclear pricing, Slow response times and Long waiting periods.

FixWise solves these issues by providing:

- Organized booking
- Faster access to services
- Clear repair process
- User experience

Objectives of the Project

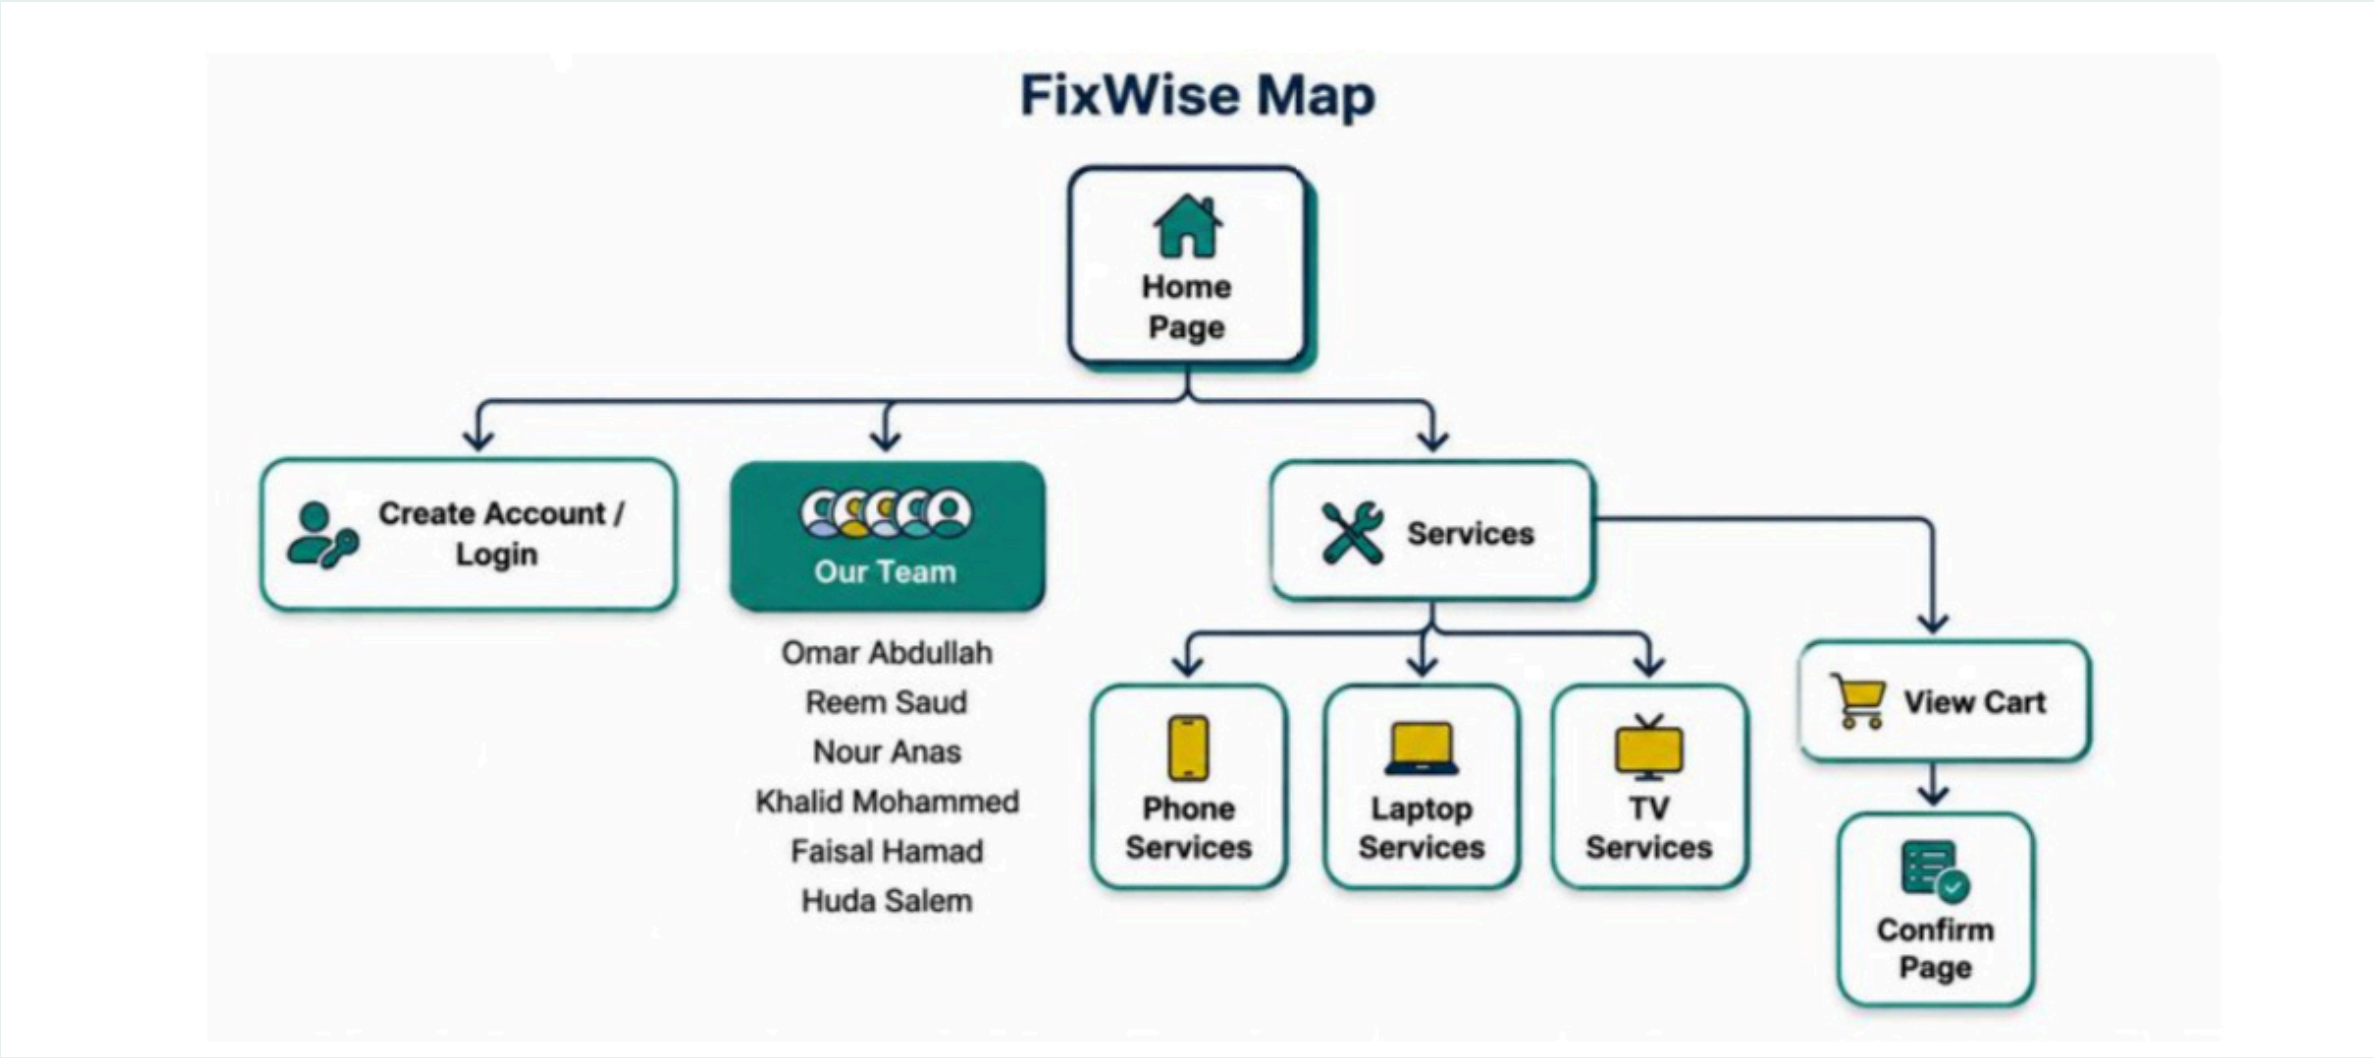

The main goals of FixWise are:

- Simplify repair booking
- Improve customer experience
- Provide responsive design
- Make navigation easier
- Support different device categories
- Validate user input using JavaScript

Site Map / Navigation Structure

This diagram shows how users navigate through the FixWise website.

Wireframes & Mockups

- We created wireframes and mockups before developing the final pages.
- The designs helped us plan the layout, page structure, buttons, cards, and navigation.
- They were used as a guide during the FlutterFlow implementation.

UI/UX Design Decisions

- Simple Interface

Clear pages with the most important information shown first.

- Color & Typography

Light blue-green colors, white cards, and dark text were used for readability.

- Navigation Flow

Home → Service Page → Cart Page → Confirmation Page

Form Validation

- Empty field detection
- Email format validation
- Password length validation
- Uppercase letter requirement
- Number requirement

Dynamic Response

- Error messages appear automatically
- Valid inputs display success messages
- Real-time user feedback

Data Reliability

- Prevents invalid input
- Responsive on all screens
- Login and signup work correctly
